

TESTING_AND_DEMO_GUIDE

NetworkPeer Testing & Demo Guide

Complete testing procedures for the NetworkPeer platform

Overview

This guide covers testing the Post-a-Job wizard, multi-worker acceptance, Collectionist/Correctionist workflow, OCR review, and in-app camera quality checks.

1. Environment Setup

Required Services

Service	URL
Web App (Production)	https://network-peer-web.vercel.app
Web App (Preview)	Check Vercel PR deployments
API (Production)	https://network-peer-api-alpha.vercel.app
Android APK	<code>apps/android/app/build/outputs/apk/development/debug/</code>

Prerequisites

- Node.js 22+
 - Java 17 (ARM64)
 - Android SDK (API 36)
 - Xcode 15+ (for iOS)
 - Physical Android phone or Emulator
-

2. Web App Testing

2.1 Post-a-Job Wizard (Client Portal)

URL: <https://network-peer-web.vercel.app/client/jobs/new>

Test Steps: 1. Navigate to `/client/jobs/new` 2. **Step 1 - Job Info:** - Title: "Street Sign Collection - Downtown" - Description: "Photograph all street signs in 5-block radius" - Location: Auto-detect or manual entry 3. **Step 2 - Task Type:** - Select "Collection" (worker captures real-world evidence) 4. **Step 3 - Media Requirements:** - Photo: min 1920x1080, JPEG/PNG - Count: 5-20 photos 5. **Step 4 - Capacity Mode:** - **Single:** One worker only (exclusive) - **Capped:** Up to N workers (e.g., 5) - **Unlimited:** Any qualified worker 6. **Step 5 - Escrow:** - Per-unit: \$2.50 per sign photographed - Total escrow calculated automatically 7. **Step 6 - Review & Submit:** - Verify all details - Submit → Job appears in dashboard

Expected Results: - Form validation works at each step - Real-time escrow calculation updates - Capacity mode changes UI appropriately - Job created with correct contract structure

2.2 Review Queue (Client/Correctionist Portal)

URL: <https://network-peer-web.vercel.app/client/review/{jobId}>

Test Steps: 1. Navigate to review page for a job with submissions 2. Open SubmissionReviewPane: - **Left panel:** Zoomable image viewer (pan/zoom) - **Right panel:** OCR results, quality metrics - **Thumbnail strip:** Navigate multiple images 3. Actions: - **Approve:** Green button, submission accepted - **Redo:** Orange button, requires note modal - **Reject:** Red button, dispute override

Expected Results: - Image viewer: pinch zoom, double-click reset - OCR confidence displayed - Quality metrics: edge coverage, sharpness, exposure - Actions update submission status correctly

2.3 Worker Dashboard

URL: <https://network-peer-web.vercel.app/worker/dashboard>

Test Steps: 1. Login as worker (collectionist) 2. Browse available jobs 3. Accept job → View assignment details 4. Open camera for evidence capture 5. Submit → Check status updates

3. Android App Testing

3.1 Build & Install

```
export JAVA_HOME="/opt/homebrew/Cellar/openjdk@17/17.0.20.1/libexec/openjdk.jdk/Contents/Home"
export ANDROID_HOME="$HOME/Library/Android/sdk"
cd apps/android
./gradlew installDevelopmentDebug --no-daemon
```

3.2 Test Scenarios

Scenario 1: Collectionist Flow

1. Login with phone + OTP
2. Browse jobs → Accept "Street Sign Collection"
3. In-app camera opens
4. Capture 5+ photos of street signs
5. Quality check runs (edge coverage, blur, exposure)
6. Submit → Status: "pending_review"

Scenario 2: Correctionist Review

1. Login as correctionist
2. Review queue shows pending submissions
3. Open submission → Full-screen image viewer
4. OCR panel shows extracted text
5. Quality metrics displayed
6. Actions: Approve / Redo (with note) / Reject

Scenario 3: Offline Support

1. Enable airplane mode
2. Complete job steps
3. Re-enable network
4. Verify background sync

3.3 Debug Commands

```
# Logs
adb logcat -s "NetworkPeer:*" -v time

# Screenshots
adb exec-out screencap -p > test_screenshot.png
```

```
# Screen recording
adb exec-out screenrecord --output-format=h264 - >
    test_recording.mp4

# Uninstall
adb uninstall com.networkpeer.mobile.dev
```

4. iOS App Testing

4.1 Simulator

```
cd apps/ios
open NetworkPeer.xcworkspace
# Xcode → Select iPhone 15 Simulator → Cmd+R
```

4.2 Physical Device

```
# Xcode → Select iPhone → Cmd+R
# On iPhone: Settings → General → VPN & Device Management → Trust
    Developer
```

5. API Testing

5.1 Health Checks

```
curl https://network-peer-api-alpha.vercel.app/api/v1/health
curl https://network-peer-api-alpha.vercel.app/api/v1/live
```

5.2 Key Endpoints

Endpoint	Method	Description
/api/v1/jobs	POST	Create job
/api/v1/jobs/:id/accept	POST	Worker acceptance
/api/v1/jobs/:id/review-queue	GET	Review queue with lease
/api/v1/submissions/:id/review	POST	Submit review decision

6. Demo Script for Stakeholders

5-Minute Demo Flow

- 1. **Landing Page** (30s): Show three portals
- 2. **Post a Job** (90s): Complete 6-step wizard, highlight capacity modes
- 3. **Worker Acceptance** (60s): Mobile app → Accept job → Capture evidence
- 4. **Review Pane** (60s): Split-pane viewer, OCR, quality metrics, approve/redo/reject
- 5. **Architecture** (60s): Contracts-first, ECS, privacy-by-design

7. Known Issues & Workarounds

Issue	Workaround
Vercel preview not updating	Merge to main or manual <code>npx vercel --prod --force</code>
API 404 on Vercel	API on AWS ECS, use ALB endpoint
Android emulator slow	Use <code>-gpu host</code> flag, allocate 4GB+ RAM
iOS build fails	<code>cd apps/ios && pod install && xcodebuild clean</code>
